

REFERENCE – drinking water University Lausanne, 1015 Lausanne, Switzerland

Products: CLASSIC 2"

„After we were able to convince ourselves of the comprehensive, fast effect of the EWO devices in the heating system, we decided to install a drinking water revitalization.

The EWO Classic 2 inch device recommended by Mr. Brun (Chrystal NTE SA) was purchased in spring 2010 and installed immediately.

Despite the good effect in the heating system, we were somewhat sceptical about using it in drinking water, especially when it comes to hot water storage, as to whether the promised success really does happen here.

After a few weeks of operation, the first effectiveness check was made on the hot water storage, which is known as a weak point.

Normally, the rusty brown mud collecting at the bottom of the reservoir will be drained every few weeks. The amazement was great when this time, instead of the usual sludge, only pure water came to light."

Mr. Marendaz
Manager building services

The house technicians are therefore completely convinced of the effective effect of the EWO water revitalization also in the drinking water sector. As a result, other buildings of the university have now been equipped.
