

REFERENZ – Trinkwasser Biohof Achleitner

Products: CLASSIC 6/4",

Everything started on the farm in Unterschaden in the fertile district of Eferding. When Ilse and Günter Achleitner switched their business to organic farming in 1990, this marked the beginning of a great development.

„It has always been clear to us that supplying people with healthy, regional food can only be ensured in the long term through biological farming. The responsible, sustainable use of nature and the entrusted earth is part of our philosophy. Instead of using synthetic fertilizers and pesticides, we use compost from our own composting plant, and thanks to the right crop rotation and the use of beneficial insects, we hardly have any problems with pests.

Due to the sale on the spot and the delivery of various outlets, there was soon too little space in the old house. In 2003, we decided to build a complete new building with organic fresh market, restaurant-café, organic culinary and the entire logistics center for delivery service and wholesale.“

ewolution of water

During the construction project, our house installer approached us with the suggestion to install water revitalization in the newly built house. Having heard a lot about this technology and being well advised by the installer, we decided to integrate this advanced, environmentally friendly system into our new facility.

Since in our area the drinking water has a relatively high degree of hardness (about 16 ° German hardness), the protection of the entire installation and the equipment was one more reason for us to buy.

We have therefore had EWO devices installed in the main line of the drinking water supply line, in the heating system, in the self-contained water supply, in the refrigeration cycle and in the supply line to the groundwater heat pumps.

We, our employees and of course the guests in the restaurant-café like to drink this lively, tasty water.

After 6 years of experience with EWO, I can say that this system has proven itself and we are completely satisfied with it."
